

# OLDROYD 'Gtx' Geotextile Membrane

Geotextile **cavity drainage** membrane  
for **basement waterproofing** applications

## Description

Oldroyd 'Gtx' is a cavity drainage membrane with a geotextile mesh welded to one side. This mesh filters out 'fines' in the groundwater, preventing them from causing blockages in other areas of the drainage system.

## Applications:

Oldroyd 'Gtx' is specifically designed for when waterproofing earth-retaining structures such as basements and retaining walls. It is designed to be applied externally, and is

generally used on new-build projects (call our technical department for details of other products used for waterproofing existing basements).

Oldroyd 'Gtx' is used as a secondary drainage layer to protect a primary waterproofing system such as as: <sup>[1]</sup>

- DryBase Vapour Membrane
- Vandex Cemelast
- Vandex BB75E
- Vandex Super

This "dual-layer" approach lessens the stress put on the primary waterproofing system, reducing water ingress caused by possible imperfections in the application of the primary system and/or structural movement.

<sup>[1]</sup> Choice of primary waterproofing system will depend on construction form. Consult our technical department for details.

## Geotextile Membrane

### Application

Oldroyd 'Gtx' is rolled out around the perimeter of the basement in an anti-clockwise direction.

It is secured at the top of the basement using Oldroyd Gun Plugs. A perforated land drain surrounded by a single-sized aggregate must be laid at the base of the construction (200mm below internal floor level).

The land drain must be laid around the perimeter of the construction and lead to an appropriate discharge point.

### Availability

Oldroyd 'Gtx' is available in 2m x 15m rolls (30m<sup>2</sup>)

### Further Information

For further information about Oldroyd 'Gtx' and waterproofing basements, contact the Safeguard technical department on 01403 210204. Safeguard can supply CAD details and NBS specifications, and also run a RIBA-approved CPD seminar entitled "Waterproofing basements and underground structures."
